SUMMARY

Final-year CSE (Big Data Analytics) undergraduate (9.48 CGPA) who builds production systems for real clients and turns business requirements into reliable, rule-driven software. Experienced in integrating AI models into live workflows, and regularly uses LLMs (Claude, ChatGPT, Gemini) for prototyping and prompt iteration. Proficient in Python, SQL and TypeScript. Fluent in English and Hindi.

EDUCATION

SRM Institute of Science and Technology Jun 2023 – May 2027

B.Tech CSE (Big Data Analytics) | CGPA: 9.48

SKILLS

Programming: Python, SQL, TypeScript, JavaScript, C++, Java, C
AI / LLMs: Claude, ChatGPT, Gemini, Hugging Face models; AI model API integration; prompt iteration
Backend: REST APIs, Django, Django REST Framework, Node.js, Express.js, Next.js API Routes
Frontend: React.js, Next.js, Tailwind CSS
Databases: PostgreSQL, MySQL, MongoDB, Supabase, Prisma
Tools: Git, GitHub, Docker, CI/CD, VS Code
Languages: English, Hindi (read, write, speak)

EXPERIENCE

Software Development Intern, NIT Hamirpur Feb 2025 – Apr 2025

Ministry of Education Project

- Integrated a Hugging Face image-classification model into a production e-waste reporting platform, handling model API calls and turning predictions into structured records.
- Designed API workflows that send model outputs to the nodal centre for report generation and evaluation, connecting AI output to a real downstream process.

Software Development Intern, IFIA Bharat (Remote) Dec 2024 – Jan 2025

- Owned delivery of IFIA Bharat's responsive website as lead of a 4-member frontend team, shipping 2 months ahead of schedule.
- Optimised performance, responsiveness and SEO, driving an estimated 30%+ increase in website traffic and online visibility.

PROJECTS

FleetLog: HOS Trip Planner & ELD Log Generator

Django, DRF, React, TypeScript, PostgreSQL, Leaflet

- Built a full-stack trip planner that converts a route and a driver's cycle hours into an FMCSA-compliant schedule, automatically inserting the required rest, break, fuel and 34-hour restart stops. Daily logs are rendered as SVG and exported to PDF.
- Designed a deterministic Python decision engine that encodes 4 overlapping regulatory limits as explicit state transitions and handles edge cases such as duty periods crossing midnight, so every output is verifiable. Validated with 180+ structured test cases.

ERP System for Global Water Solutions

Next.js, TypeScript, PostgreSQL, Prisma ORM, Tailwind CSS

- Worked directly with a non-technical business owner to map an entirely manual, paper-based workflow and translate it into a full-stack ERP with 15+ interconnected modules, authentication and role-based access.
- Iterated on features through ongoing client feedback; the system is now in daily production use, and the client credits it with faster operations and business growth.

ACHIEVEMENTS

VIT Chennai Full Stack Hackathon — 1st Runner Up

- Led a 4-member team among 90+ teams to build a full-stack event management platform with authentication, registration and payment integration.

LEADERSHIP & ACTIVITIES

Technical Team Lead, CHiPSET SRMIST Aug 2025 – Present

- Lead a 45+ member technical team managing the club website and technical operations; organised 10+ technical initiatives for 80+ participants.
